

Frontiers Fellows

A private society for the people building the next space economy.

Freedom to build. Progress for humanity. Global by design.

OUR PURPOSE

The frontier should expand human possibility.

Frontiers Fellows brings together the people building the next space economy - across science, engineering, entrepreneurship, operations and capital.

We believe humanity advances when people are free to discover, experiment, compete, collaborate and build. Our purpose is to create the trust, relationships and shared direction from which consequential ideas, technologies and institutions can emerge.

Frontiers Fellows is independent by design. We are bound not by party, institution or nationality, but by a shared belief in liberty, scientific inquiry, technological progress and responsible building.

OUR CONVICTION

An open frontier creates more possibility.

The next space economy should not be defined by a single nation, company or institution. It should make room for new entrants, new science, new markets and new forms of cooperation across borders and disciplines.

Institutions matter. Their purpose is to protect people, preserve fair competition and create the conditions in which responsible builders can move. Our instinct is constructive: where something important is missing, build it; where systems are closed, open pathways; where scarcity appears permanent, challenge it with science and technology.

NINE PRINCIPLES OF THE FRONTIER

01 FREEDOM TO BUILD

Human agency drives the future. People should have broad freedom to invent, experiment, explore and create.

02 PERMISSIONLESS INNOVATION

Better ideas should not need incumbent permission. New entrants deserve the opportunity to prove themselves.

03 OPEN MARKETS BEYOND EARTH

Competition, interoperability and broad access should define the frontier - not unnecessary monopolies or closed systems.

04 SCIENCE WITHOUT BORDERS

Truth is universal. Discovery advances through intellectual freedom, evidence and exchange across disciplines and geographies.

05 DECENTRALIZE THE FRONTIER

Resilience grows when capability, ownership and opportunity are distributed rather than concentrated.

NINE PRINCIPLES OF THE FRONTIER / CONTINUED

06 ABUNDANCE IS A CHOICE

Scarcity is not always a law of nature. Technology can expand access to energy, computation, connectivity, materials, manufacturing and ultimately habitable space.

07 COMPETITION CREATES PROGRESS

Competition sharpens execution. Collaboration enables shared science and infrastructure. A healthy frontier needs both.

08 INSTITUTIONS SHOULD ENABLE PROGRESS

Institutions should protect people, preserve fair competition and create the conditions in which responsible builders can move.

09 BUILD RATHER THAN RESTRICT

Our instinct is constructive. Prototype. Test. Measure. Improve. Address genuine risks without making stagnation the default.

MEMBERSHIP & TRUST

Membership is earned, not purchased.

Frontiers Fellows is intentionally curated. Fellows are invited or nominated on the basis of contribution, potential, character and alignment with this charter. Prestige alone is not enough. Contribution matters more than title.

Trust is the infrastructure of the society. Fellows are expected to challenge ideas without diminishing people, respect confidentiality and intellectual property, credit the builder, disclose material conflicts and contribute before they extract. The society must remain independent of capture by any government, corporation, investor, political faction or single technological doctrine.

OUR ROLE

Turn relationships into progress.

We convene people who would not otherwise meet, surface problems worth solving, connect knowledge with execution and create the trust from which new collaborations can emerge.

We measure our value not by the size of our network, but by what Fellows discover, build, fund and enable together.

OUR COMMITMENT

Build an open and abundant frontier.

We choose openness over gatekeeping. Evidence over status. Competition over stagnation. Contribution over prestige. Building over waiting.

*The frontier is not somewhere we arrive.
It is something we build.*

We believe humanity should continue outward: discovering more, understanding more, building more and creating greater possibility for those who follow.

Do look up. Build what comes next.
